

## Did you know...

...with Amadeus e-Travel Management you can connect to more than 500 additional services?

Read on to find out how the 'More Services' feature is being used today by corporations to help their travellers at every stage of their trips (before, during and after):

### Trip preparation

- **Travel advice websites:** Helping travellers find the information on their destination in order to properly prepare for their trips: for example details on any visa requirements or health risks.
- **Flight services:** Making travellers' lives easier by allowing them to check-in to their flights or view flight schedules directly from Amadeus e-Travel Management.

### Ground transportation

Many corporations are using additional services today to integrate ground transportation into Amadeus e-Travel Management. By offering all content relevant to their travellers in a single point, corporations have greater control over their employees' travel, giving greater travel programme visibility and helping boost online adoption.

Some examples:

- **Public transport websites:** Providing a low cost alternative, by linking to airport transfer services such as local buses, trains and coaches.
- **Private transport providers:** Corporations can integrate their preferred taxi or limousine companies in Amadeus e-Travel Management and ensure their travellers get access to any negotiated fares they may have with them.
- **Airport parking facilities:** for travellers who prefer to drive to the airport in their own car, links to airport parking services from the online booking tool can make their lives easier.

### Supporting corporate security programmes

As part of corporations' duty of care to their travellers, communication of corporate security policies and advice on travel risk in certain destinations is key. The 'More Services' tab is an ideal solution to give travellers easy access to information such as:

- > Company security policies and advice for travellers
  - Travel safety advice
  - Risk ratings per destination countries/cities
  - Procedures in case of problems/emergencies while travelling
- > Third party travel risk management specialist sites

## Destination services

'More services' can also be used to help travellers find background information on their destination, such as:

- **Travel guides:** Helping travellers find information on where to eat and drink, spend leisure time and much more.
- **Online maps & driving directions:** Allowing travellers to prepare for their trip beforehand and avoid potential language barriers when they reach an unknown destination and need to get somewhere.

### Going Green

The social and economic implications of global warming have increased pressure on corporations around the world to become more environmentally friendly in their practices. Self-booking tools can be a powerful way for corporations to increase awareness on environmental issues within their workforce.

Today, corporations are using 'More Services' to link to Carbon Footprint calculators directly from Amadeus e-Travel Management, giving their travellers access to information on the direct impact their travel has on the environment.

### And much more...

Corporations have full flexibility with the 'More Services' feature to offer their travellers many other travel related services, such as paying for access to airport lounges or linking to the company's travel policy or other relevant areas on the company intranet.
