- External suppliers- phase II

The Total Trip Experience for Corporate Travellers

Amadeus' vision is to provide next generation travel technology, encouraging collaboration amongst all the actors of the travel industry. To enable this we are investing openly in a set of components that will allow seamless integration of content, data and systems whether they are part of Amadeus or whether they are from 3rd party suppliers.

Over the next three years, Amadeus will provide a unique approach to Corporate Travel. The Online Booking Tool will evolve beyond trip booking to a complete Traveller Care experience, providing the technology that spans before, during and after all the travel steps. In the forthcoming releases we are taking our first steps towards this approach revising the travel planning experience completely.

The Corporate Travel Total Trip Experience

1. Calendar Integration

When the user creates a new calendar entry a request for an End-to-end Trip Proposal will be generated and the user will be automatically logged into the Self-Booking tool.

2. End-to-end Trip Proposal

Based on calendar entries and other configurable criteria, an optimal timing for the trip will be proposed to the traveller, based on a full contextual search for the entire itinerary of the trip, including flight, rail, car, hotel and ground transportation. The End-to-end Trip Proposal will be the best possible trip alternative, based on predetermined travel policy and the availabilities of the moment.

3. Travel Dossier

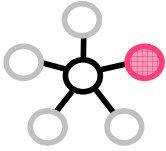

By consolidating all parts of the trip the system will provide the traveller with a single container for all trip arrangements: the Travel Dossier. The Traveller will be able to rearrange the automatically defined travel options to suit his/her preferences.

4. Mobile Travel Services

A suite of services to provide the traveller with any necessary information required for and during the trip. For example, should an unexpected event arise while the traveller is on his/her trip, the appropriate message could be sent to him/her.

5. Expense Management

Integration tools and services which will allow the travel expenses to be automatically sent to a corporation's own expense management system. In the future, this will be synchronized at payment time.

Experience Amadeus Single View

As part of the **End-to-end Trip Proposal** process for Amadeus e-Travel Management, the new **Amadeus Single View** gives you a revolutionary B2C (leisure) travel experience where you can shop around and check in real time the choices made in your shopping basket. And there is more....

Even more flexibility and choice:

- Combine any different types of fares (one way or return) and different classes of service from a unique display, including low cost carrier flights.
- Personalize the display, through the use of advance filtering options, to show only the travel options matching your needs, and quickly glance through them.
- Include fare groups, you have created, in the display.

And a More simplified booking process:

- Narrow down the selection by time, price range, provider, origin or destination airport and the number of connections.
- Select the cheapest option based on the criteria you have selected
- Make the most suitable travel combination, always remaining compliant with the corporate travel policy

Initially, through release 11.0 of Amadeus e-Travel Management, Amadeus Single View will address the complex area of Air travel. Rail will follow in a subsequent release. With time, the same principles of offering flexibility and choice in a user friendly manner will be applied to the Hotel and Car areas too.

Amadeus Single View for Air & Rail will be delivered in a phased approach across releases 11.0, 11.1 & 11.2 of Amadeus e-Travel Management.

External Suppliers Integration – Phase II

An additional part of the **End-to-end Trip Proposal** concept, **External Suppliers Integration** will help you to create the best travel experience for your travelers by giving them access to information of agreed local suppliers (ie. Ground Transportation). This way bookings are made online by consolidating all travel components within Amadeus e-Travel Management without the need to look elsewhere.

In this second phase, Amadeus e-Travel Management will retrieve the information on external supplier bookings and store it with the trip details. Travelers will therefore be able to view these details at any point through Amadeus e-Travel Management. Travel Agents will also have access to this information.

PCI DSS (Payment Card Industry Data Security Standard)

PCI DSS was designed by major credit card companies as a worldwide benchmark, for the protection of cardholder identity and transaction information. Amadeus is committed to comply with this standard, which currently comprises of 12 requirements.

The implementation of the standard helps organizations that process card payments to prevent credit card fraud, hacking and various other security issues. Once more Amadeus has achieved compliance for Amadeus e-Travel Management and Amadeus Selling Platform and is listed in the Visa Europe PCI compliance list.

PCI DSS adds extra security value for customers, ensuring Amadeus processes credit card transactions at a high security level.
