

WHAT IS E-TICKETING?

Electronic ticketing ([e-ticketing](#)) allows you to send ticketing information directly to an airline so that passengers can check in at the airport and board flights without requiring printed tickets.

When you issue an electronic ticket ([e-ticket](#)) through Amadeus by making a [TTP/ET](#) entry, the system sends the flight coupons as a message to the airline. If the airline accepts the e-ticket Request, the information is stored in the airline's own system as an e-ticket ([ET](#)) record.
